- Mercedes Benz brake light camera with 4-pin connector
- Instructions

*Please note: an extra video extension cable (5, 10 or 15m) is recommended for use within this installation (**extension sold separately**).*

INSTALLATION

1. Remove the factory installed brake light from the vehicle and unplug the connection cable.
2. Connect the new combined brake light/camera assembly to the brake light connector and test to ensure correct brake light operation.
3. Connect the fixed camera cable coming from the new assembly to the 4 pin connection on the extension cable (**sold separately**) and fit the brake light camera to the vehicle in place of the factory light that you have removed, taking care not to trap any of the cables.
4. Connect the Black wire to a suitable ground and connect the Red wire to the reversing light circuit or to an interface which provides a reverse signal.
5. Chase the extension cable down the vehicle and connect to the display screen and ensure that the image is displayed correctly.
