

GAS ***ALPHA*** **AB8SA**

The ALPHA AB8SA is the perfect choice if you lack bass and space in your vehicle! This compact powerhouse is small enough to stow away under your seat, and no matter the vehicle, be it an RV, a truck, an excavator, the family SUV or your classic hot-rod there is always room (and need) to install a suitable subwoofer! The AB8SA is ready to install straight out of the box. A connection kit and mounting brackets are included, and if your stereo has no RCA outputs you can connect it using the high-level input. Also included is a bass remote that lets you control the bass level from the front seat.
